

Ex.No:- 2

IoT for smart home application

OBJECTIVES

The method of regulating house appliances automatically utilizing various control system approaches is known as IoT home automation. Various control mechanisms may be used to regulate electrical and electronic equipment in the house, such as windows, refrigerators, fans, lights, fire alarms, kitchen timers, and so on.

PROCEDURE:

Step 1:

1. Create a channel in the Thingspeak, to read a field data.
2. Using Add widgets, add lamp indicator for the field 1 data and configure the widget parameter as shown below.

Help

API keys enable you to write data to a channel or read data from a private channel. API keys are auto-generated when you create a new channel.

API Keys Settings

- Write API Key:** Use this key to write data to a channel. If you feel your key has been compromised, click **Generate New Write API Key**.
- Read API Keys:** Use this key to allow other people to view your private channel feeds and charts. Click **Generate New Read API Key** to generate an additional read key for the channel.
- Note:** Use this field to enter information about channel read keys. For example, add notes to keep track of users with access to your channel.

API Requests

Write a Channel Feed

GET https://api.thingspeak.com/update?api_key=83MJC2KUHXC0GXII&field1=0

Read a Channel Feed

GET https://api.thingspeak.com/channels/2404464/feeds.json?api_key=IFVB4X7U8IGMLSBY

Read a Channel Field

GET https://api.thingspeak.com/channels/2404464/fields/1.json?api_key=IFVB4X7U8IGMLSBY

Read Channel Status Updates

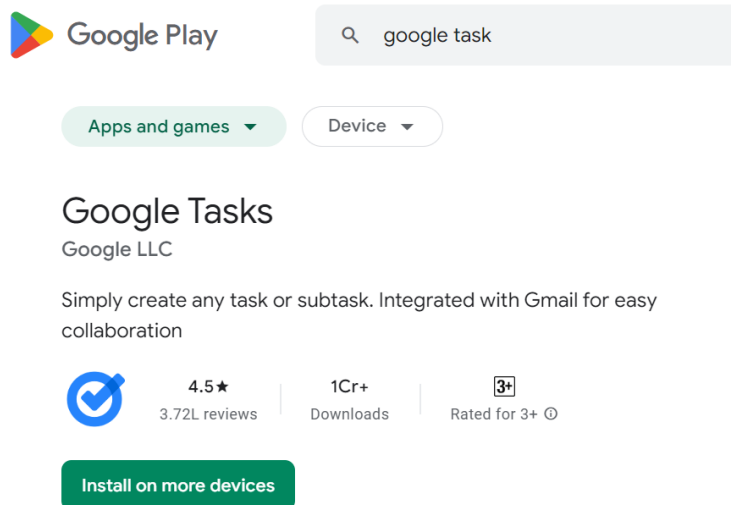

GET https://api.thingspeak.com/channels/2404464/status.json?api_key=IFVB4X7U8IGMLSBY

Note: Since we are using free version we can use only one automation command at a time. Hence, let the lamp be in OFF position

OFF: https://api.thingspeak.com/update?api_key=83MJC2KXXXX0GXII&field1=0

Step 2:

1. Download and install google tasks from play store (Iphone users from APP store)

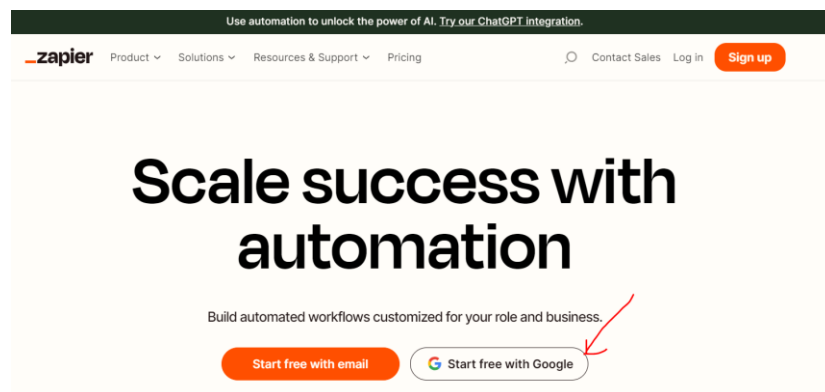

2. Click on new list to create task list and Name them as Home or any user defined.

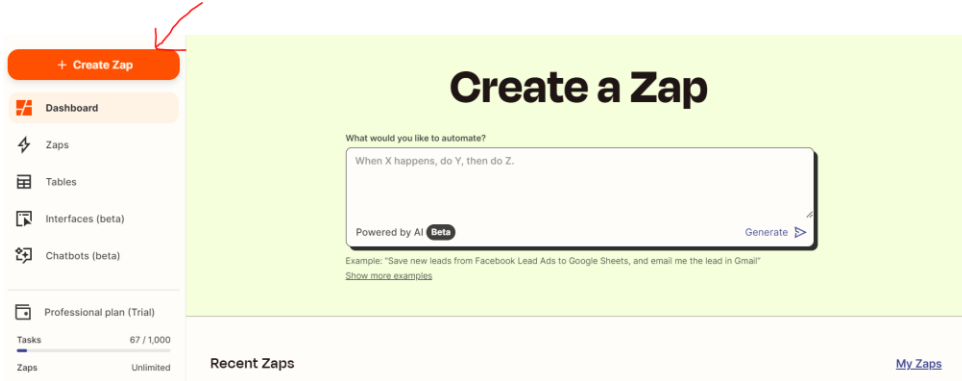

Step 3:

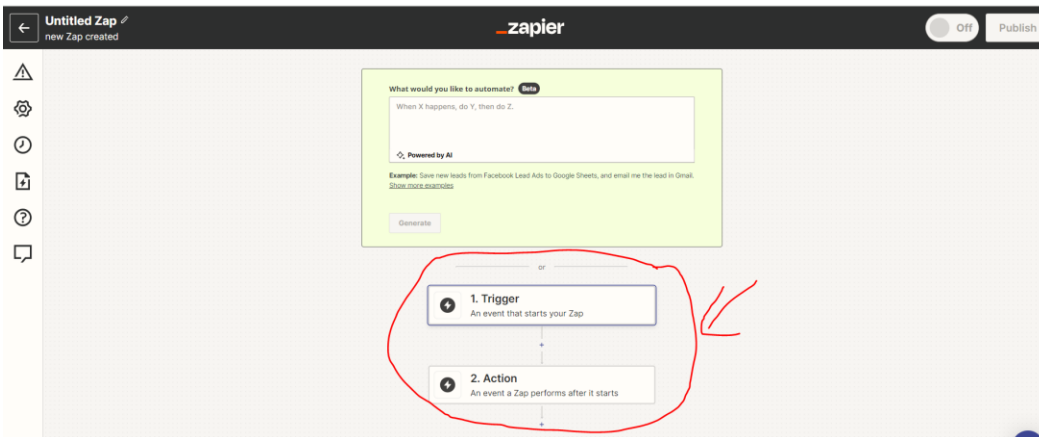

1. **Open Zapier using the URL-** <https://zapier.com/>
2. Click on Start free with google, use your google login id to start with.

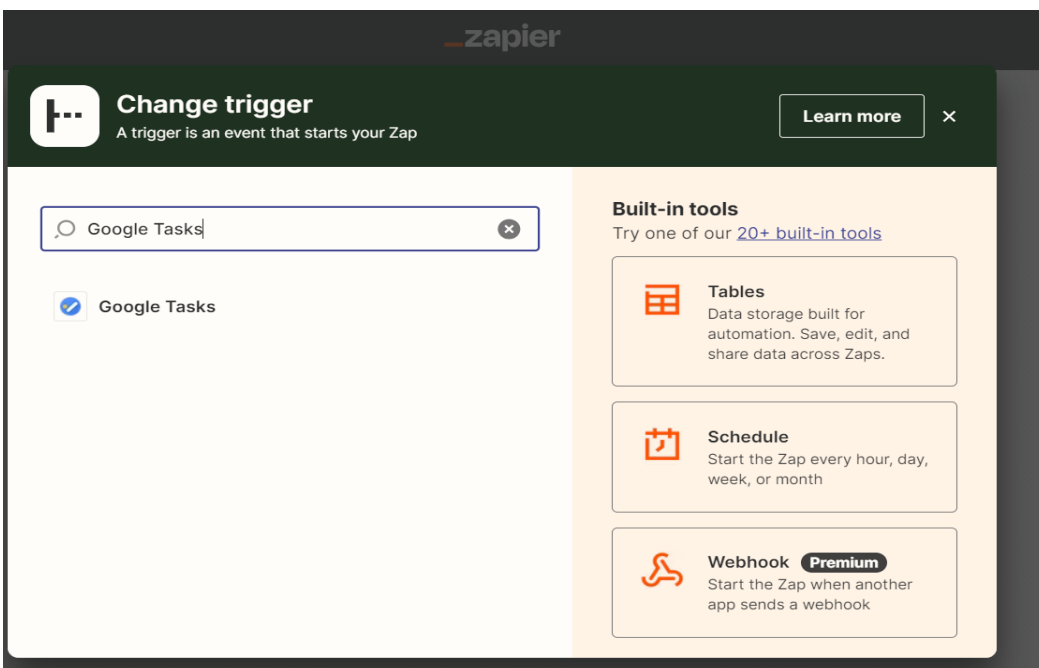

3. Click on Create Zap to create automation project.

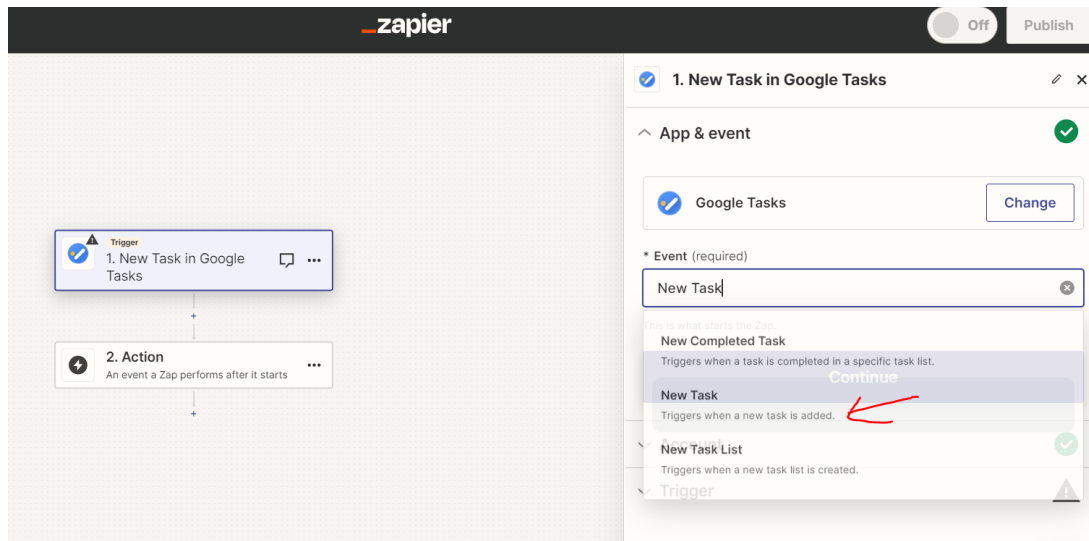

4. Use Trigger and Action method, Click on the trigger to configure.

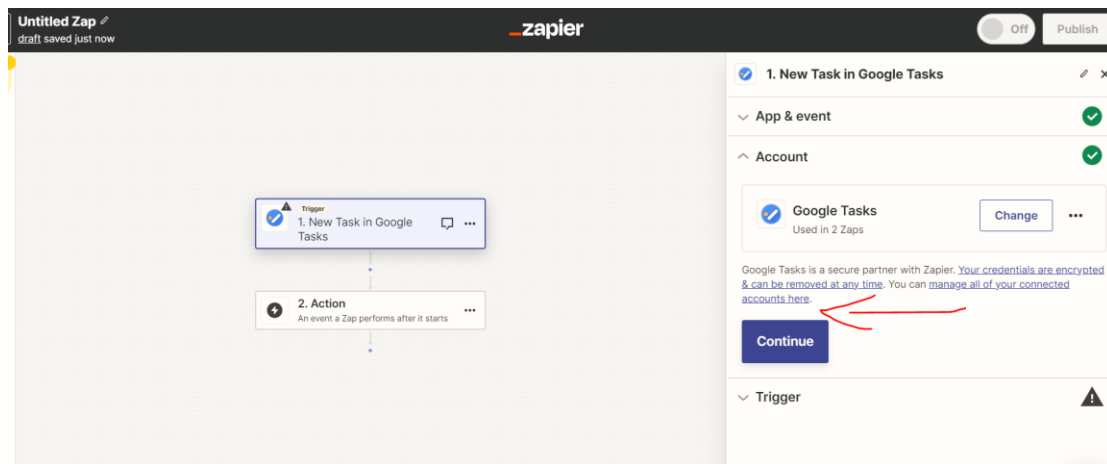

5. **Trigger:** search for google tasks and choose it.

6. Follow the figure to Configuring the trigger: Google tasks
7. APPS and Events: Select New Task

8. Accounts : Use your Google ID to proceed with.

9. Trigger: under the task list, select the task what you have created in your google tasks app.

Continue with selected record

11. Action: Click on action to configure it.

12. Search for webhooks by Zapier and choose it.

13. Event: Under choose the event select POST and continue

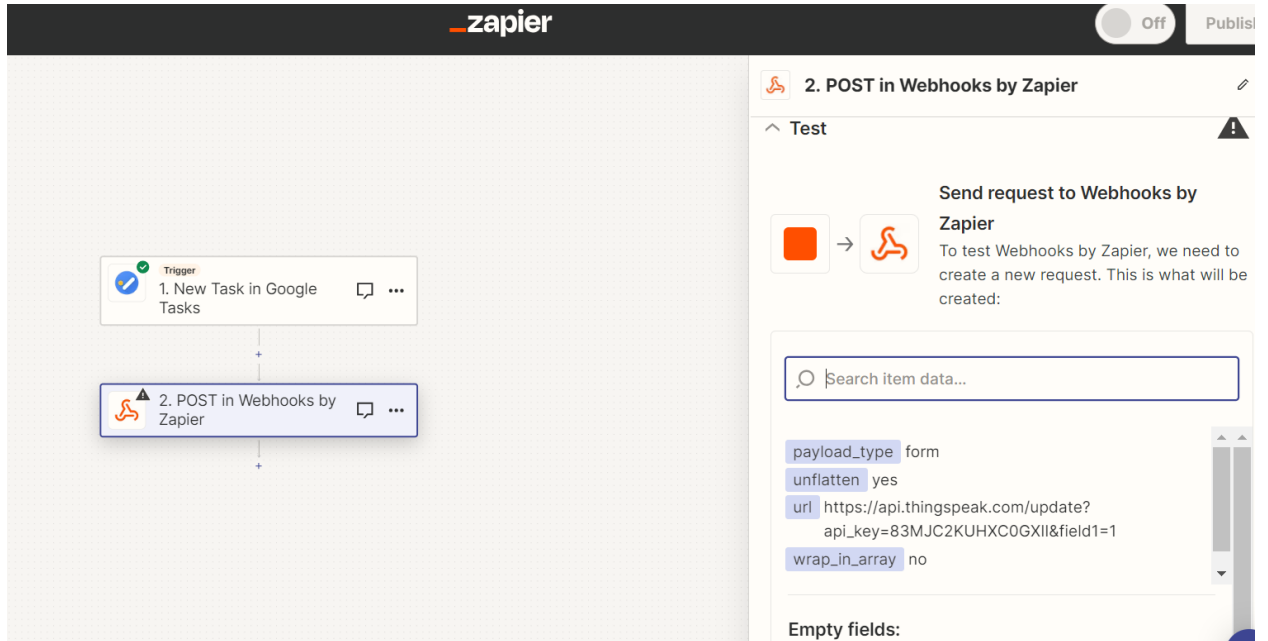

The screenshot shows the Zapier interface. On the left, a Zap is being created with a trigger '1. New Task in Google Tasks' and an action '2. Webhooks by Zapier'. On the right, the configuration panel for 'Webhooks by Zapier' is visible. The 'App & event' section shows 'Webhooks by Zapier' as the selected app. The 'Event' dropdown is open, showing options: 'Custom Request', 'GET', 'POST' (circled in red), and 'PUT'. The 'POST' option is selected, indicating the event type for the webhook.

14. Under Action: paste the ON API URL of the Thinspeak and click continue to proceed

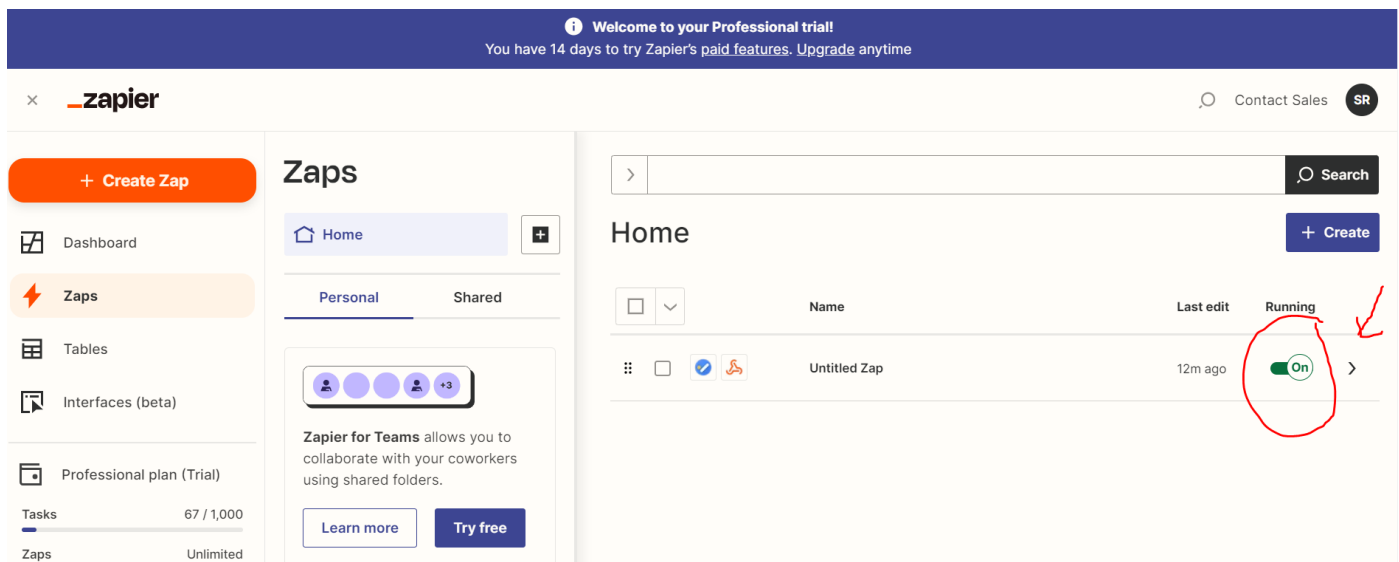

ON: https://api.thingspeak.com/update?api_key=83MJC2KXXXX0GXII&field1=1

The screenshot shows the Zapier interface. On the left, a Zap is being created with a trigger '1. New Task in Google Tasks' and an action '2. POST in Webhooks by Zapier'. On the right, the configuration panel for 'POST in Webhooks by Zapier' is visible. The 'App & event' section shows 'Webhooks by Zapier' as the selected app. The 'Action' section shows the 'URL' field filled with the Thinspeak API URL: `https://api.thingspeak.com/update?api_key=83MJC2KXXXX0GXII&field1=1`. A red arrow points to the URL field. The 'Payload Type' is set to 'form'. The 'Data' field is empty, with a placeholder 'Enter text or insert data...'.

15. Test: Click on test step to configure action

16. Open the main dashboard in the zapier and turn ON the created ZAP

Step 4: Running the task

1. Open google Tasks app in your mobile and under the created Tasks (Home) click on + sign to create new task.
2. When the new task is created the bulb glows in the Thingspeak.
